

Memorandum

To : All Deputy District Directors
Project Development

Date : September 24, 1990

File No.:

From : DEPARTMENT OF TRANSPORTATION - Division of Project Development
Office of Landscape Architecture

Subject : Irrigation Facility Installation on Structures

Approval must be obtained from the Office of Structures Maintenance and Investigations, (OSMI) for the installation of irrigation supply line and sprinkler control conduit on existing structures or walls. This procedure is being formalized to protect the integrity of the structure and ensure OSMI involvement during the PS&E process.

Initial contact should be made during the "early design stages", furnishing OSMI with irrigation plan sheets, standard Landscape Architecture Standards Committee (LASC) details (Pipe Anchor Type I and Pipe Anchor Type II), and specifications. OSMI will either approve the proposal or, if unusual conditions warrant special design work, provide specific plans, details, and specifications. Also, OSMI should be included on the list for final district PS&E review.

For the northern Districts (1,2,3,4,5,6 and 10), contact John Harrington, OSMI, in Headquarters, ATSS 485-8148, and for the southern Districts (7,8,9,11 and 12), contact Paul Askelson, OSMI, in District 07, ATSS 640-3760.
